Autodesk started developing AutoCAD for the Apple IIe in 1982 as a desktop app for Apple II microcomputers. Initially, an Apple IIe mouse was used to move a cursor over the screen. Then in 1983, the use of a trackball was added. The first AutoCAD for Apple IIe was the Construction Suite and was released in February 1984. At that time, the new AutoCAD for Apple IIe was called "AutoCAD 1.0" and the Apple II/Apple IIe, the first Apple computer, was only 12 months old. In 1986, Autodesk released AutoCAD for IBM PC compatible computers. The Autodesk release of AutoCAD for IBM PC, was called "AutoCAD 2.0". In 1991, Autodesk released the first version of AutoCAD for the Macintosh. The Macintosh was a new platform and the first products were more "desktop publishing" related. The company's developers decided that they could make a better product if they used the same approach as the other releases, which was the PC version. The first version of AutoCAD for Macintosh was called "AutoCAD 1.5". The Macintosh versions of AutoCAD have remained compatible with the PC versions. The first release of AutoCAD for Windows was called "AutoCAD 2.1" and it was released in October 1991. In 1992, Autodesk introduced AutoCAD Structural for Windows to support the design and construction of steel reinforced concrete buildings and was released as AutoCAD Structural 2.0. With AutoCAD Structural 2.0, Autodesk introduced a computer-aided-manufacturing (CAM) product called "StruCAD" in 1995. It was a software product that allowed users to create assemblies on a single screen and then move the parts into the manufacturing software. The Autodesk release of AutoCAD Structural 2.0 was called "AutoCAD Structural 2.1". The first release of Autodesk Architectural Desktop for Windows was AutoCAD Architectural Desktop 1.0 in 1995. Autodesk Architectural Desktop was renamed "AutoCAD" in 2001. Autodesk released AutoCAD for Windows in 2003. The first version of AutoCAD was AutoCAD 2002 and it was an update of the Microsoft

Windows desktop edition of AutoCAD 2000.

MicroStation supports an XML-based programming language similar to AutoLISP. MicroStation programming is also supported through Visual Studio. History The Autodesk company was founded in 1982 by a small group of students at Stanford University, who included Kevin Carmony, Paul Deutsch, and Mike Luebbe. The group founded Autodesk to help independent artists and small studios and eventually expanded into a large software company. The company began with their first product, Inventor. This product was based on a programming language called Computer Aided Design (CAD) and graphic interface called the SmallTalk environment. CAD had been used by several of the students including Ed Breen and Michael Benedikt. The Inventor software was the first product to be created by Autodesk. At the time it was one of only two Macintosh CAD programs. Autodesk's first venture outside of CAD was to design a software package for the Sun Microsystems SPARC workstation. This software, AutoCAD Cracked Accounts R17, was a vector graphics product. Autocad, Autocad LT, Inventor, Mirage, Mira, and MicroStation are the product line Autodesk uses the "Autodesk" name for (for the most part). The Autodesk Reference Manual is the user manual for each product. In addition to these products, Autodesk also manufactures parts of AutoCAD and other CAD software. In May 2003, Autodesk became part of the GE Capital division of General Electric (GE). In January

2005, Autodesk introduced Autocad 2004, which is the current version of the CAD system. In April 2013, Autodesk acquired AutoCAD Systems and AutoCAD LT from The Carlyle Group. In September 2013, Autodesk sold the AutoCAD and AutoCAD LT operations to AutoDesk a1d647c40b

Weekly Writing Challenge: Thinking Out Loud This is one of the prompts in the weekly writing challenge, which is to write something in the first person, about something that happened to you in the last week. So, I wrote this when I was taking a walk with my daughter yesterday. She is really quite the outdoors girl and she's been interested in bees since she was 3. Last week we were out walking on the beach and I saw this teeny, tiny stingray getting it's tail caught in some fishing line. I screamed, for the world to see, at the top of my lungs, "GOOOD GAWD, A STINGRAY! DO SOMETHING!" And he did. He jumped up in the air and away from that fishing line, took a couple of quick, silent steps, made a sharp left and then right, before he disappeared under the waves. What do you think I should have done? I'd have died! Had I not been a trained EMT, I would have died. The stingray is not venomous, but I don't want to be stung by one. The thing is, you don't always know what you're going to do when you run into an emergency situation. While you
